

Anti-Slip Ladder Rungs

Anti-slip ladder rung covers provide excellent traction to existing slippery or worn ladder rungs due to the robust alumina oxide grit incorporated into the rung cover.

They reduce the risk of slips from ladders and increase ladder safety due to the greater surface area available.

Slip protection is vastly improved by guarding against rainfall and frost as well as oil, chemicals or mud, thus raising the health and safety standards of the facility.

Generally supplied in yellow these ladder rung covers can come in any RAL color – they can even come with a luminescent finish for greater visibility in low light conditions.

Features and Benefits

- Excellent anti-slip properties
- Light Weight
- Easily installed
- Easily cleaned
- Corrosion resistant
- Improves Health and Safety
- Durable and long lasting
- Suitable for all environments
- Supplied "cut to size"
- Choice of color (including luminescent)

Available with a semi-circular or “U” shaped profile and internal widths of 20, 25, 30, 25 or 40mm
